

YASH VARDHAN

Full-Stack Engineer · TypeScript / React / Node.js · 3 internships · 6+ production deployments

[yash-pluto.vercel.app](#) · +91 92045-92139 · vardhan.yash3105@gmail.com · [GitHub](#)

PROFILE

Full-stack engineer who has shipped 6 production systems serving real users, including a platform that handled 5.6M+ user sessions, across 3 companies in under 12 months. Specializes in TypeScript and JavaScript across the full stack: React and Next.js on the front end, Node.js and Express on the back end, with MongoDB and Redis for data persistence. Proven track record of measurable delivery: 40% page-load reduction, 30% checkout reliability lift, and 28% latency cut, all in production environments.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript (ES2022+), Python (intermediate), HTML5, CSS3

Front-end: React.js, Next.js, Tailwinds, Framer Motion, GSAP, responsive & accessible

Back-end: Node.js, Express.js, REST API design, Socket.IO, server-side rendering

Databases: MongoDB, Redis, Mongoose ODM

DevOps & Cloud: Docker, AWS (EC2, S3), Git, GitHub, GitHub Actions, CI/CD pipeline

Tooling: Postman, Jira, Notion, Lighthouse, Chrome DevTools, Photoshop

WORK EXPERIENCE

Ridgemonst Site Solutions · Full-Stack Developer Intern

Jan 2025 - Mar 2025

- Delivered 3 production eCommerce platforms for global clients, cutting average page-load time by 40% through React component architecture optimization and Next.js server-side rendering.
- Improved payment checkout reliability by 30%, measured via transaction error-rate logs, by designing Stripe and PayPal integration flows with full error-handling and retry logic in Node.js and Express.js.
- Reduced post-merge defects by 25% across a 4-engineer team, as tracked in Jira, by enforcing TypeScript strict mode, structured Git branching conventions, and systematic peer code review.

Unified Mentor Private Limited · Full-Stack Developer Intern

Dec 2024 - Jan 2025

- Accelerated time-to-interactive by 35% as measured by Lighthouse by migrating a legacy JavaScript codebase to a typed TypeScript and React architecture with lazy loading and code splitting.
- Achieved 100% cross-device compatibility across 5 screen breakpoints by building a responsive UI system grounded in accessible HTML semantics and Tailwind CSS utility patterns.
- Reduced UI bug reports by 20% by establishing a component-testing workflow and writing reusable design pattern documentation, cutting new contributor onboarding time across the team.

Mapple Business Solutions · Front-End Developer Intern

May 2024 - Aug 2024

- Cut user-interaction latency by 28%, profiled via Chrome DevTools, by refactoring React components and eliminating unnecessary re-renders using memoization and scoped state isolation.
- Maintained zero unresolved merge conflicts across 8 shipped UI features by enforcing clean commit hygiene and async pull-request review workflows via Git and GitHub.

PROJECTS

Migration for a 5.6M-user Discord Platform - Flantic - *Next.js · React · TypeScript · TailwindCSS · Framer Motion · GSAP*

- Sole engineer on a full site rebuild for Flantic (GreenBot), a Discord bot with 5.6M+ historical user sessions, redesigned UI/UX architecture from scratch and completed migration with zero downtime.
- Achieved sub-2s load time and minimal RAM footprint by optimizing asset delivery, eliminating render-blocking scripts, and replacing heavy CSS transitions with GSAP-controlled animations.

Shadowlinks - Full-Stack Link Management Platform - *React · Node.js · Express · MongoDB · Socket.IO*

- Engineered a mobile-first Linktree alternative with a MongoDB-backed REST API, real-time Socket.IO updates, sub-100ms interaction response, and full ownership from database schema design to animated UI.
- Structured the Express.js back end with modular route architecture and Mongoose ODM validation, reducing API error rate to under 1% across all endpoint types during testing.

Developer Portfolio - Performance-Optimized Showcase - *React · Next.js · TailwindCSS · Framer Motion · GSAP*

- Built a fully responsive dark-themed portfolio with animated GitHub project previews and a Lighthouse performance score above 95 and time-to-key-info under 4 seconds on mobile.

EDUCATION

Amity University, Ranchi · B.Tech in Computer Science

2025 - 2029

Relevant coursework: Data Structures & Algorithms, Object-Oriented Programming, Database Management Systems, Operating Systems, Computer Networks.

Active: Self-directed study in system design, open-source contribution.
